Education

Doctor of Philosophy in Economics, Australian National University 2019–2026
Committee: Sephorah Mangin, John Stachurski, Fedor Iskhakov

Bachelor of Actuarial Studies / Bachelor of Economics (Honours), Australian National University 2012–2017
Supervisor: John Stachurski

Fields

Monetary Economics, Search Theory, Asset Pricing, Financial Economics, Macroeconomics

Working Papers

"*Asset Price Dispersion, Monetary Policy and Macroprudential Regulation*" (Job Market Paper)

Investors in financial markets often trade the same asset at different prices, and sellers sometimes receive no bid (a flash crash). One reason is that the price an investor trades at depends on how many brokers quote to that investor. This paper asks, "How do monetary policy and the regulation of intermediaries affect asset price dispersion and flash crash risk?" To answer this, it introduces price posting by brokers into a search-theoretic model of money and asset exchange. Higher inflation or tighter regulation reduces the number of bids, lowers equity prices and raises flash crash risk. The welfare-maximising level of flash crash risk is positive, because quotes are costly. Inflation shifts the gains from trade from sellers to buyers, so too few brokers bid, and the Friedman rule is optimal: without regulation, it brings flash crash risk down to its welfare-maximising level. Surprisingly, however, any regulation of intermediaries keeps flash crash risk above that level, even at the Friedman rule.

Scheduled presentation:
Workshop of the Australasian Macroeconomics Society, University of Tokyo Nov 2026

"*Optimal Competitive Dispersion*" (with Sephorah Mangin and Yizhuo Zhang)

Consumers often pay different prices for the same good. One reason is that the price paid by a consumer depends on the number of sellers competing for that particular consumer. In general, the average price depends on both the degree of competition (the average number of competing sellers) and the degree of *competitive dispersion* (the dispersion in the number of competing sellers). This paper asks, "What is the optimal degree of competitive dispersion?" In a simple model with search frictions, we find that buyers and sellers do not generally agree on the optimal degree of competitive dispersion. In less competitive markets, buyers want more dispersion than sellers. In more competitive markets, sellers want more dispersion than buyers. We apply our results to platform design.

Scheduled presentations:
NBER/NSF/CEME Conference in Mathematical Economics, Carnegie Mellon University Nov 2026
Asia-Pacific Industrial Organisation Conference, Xiamen University Dec 2026
Economic Theory Festival, Australian National University Dec 2026

"*Asset Pricing with Collateral and Resale Premia*"

Asset prices respond ambiguously to monetary policy: easing sometimes lowers dividend yields, as in traditional and liquidity-based monetary-style asset models, and sometimes raises them, as in monetary resale premium models. This paper reconciles these views by developing a monetary over-the-counter (OTC) model where assets serve both as collateral for goods and asset purchases and as resaleable securities. The framework generates both collateral and resale premia, explaining why dividend yields can move in opposite directions under monetary easing/tightening. Further, we show that policy remains effective in the cashless limit, and that the cashless limit equilibrium differs from the nonmonetary equilibrium, highlighting that money's role cannot be abstracted from asset pricing.

Research Experience

Research Assistant, QuantEcon (Professors John Stachurski and Thomas J. Sargent) 2018, 2025–2026

- Contributor to `quantecon.py` and to the *Quantitative Economics with Python* lecture series
- Acknowledged in *Dynamic Programming I & II* and *Economic Networks* (Stachurski and Sargent)

Research Assistant to Dr Ayushi Bajaj, Monash University 2023
Research Assistant to Associate Professor Timothy Kam, Australian National University 2021
Research Assistant to Professor Kieron Meagher, Australian National University 2017

Teaching Experience

Associate Lecturer, Australian National University 2022–2023

- Graduate: Financial Economics
- Undergraduate: Macroeconomics 1, Microeconomics 2
- Visiting: Computational Economics, Data Science for Economists (Sungkyunkwan University)

Teaching Assistant, Australian National University 2017–2022

- Graduate: Macroeconomic Theory, Advanced Econometrics I, Computational Methods in Economics, Macroeconomic Analysis, Applied Macro and Financial Econometrics, Optimisation for Economics, Economic Models, Introductory Econometrics
- Undergraduate: Macroeconomics 1, Econometrics II
- Visiting: Quantitative Economics (Peking University HSBC Business School)

Scholarships and Grants

Australian Government Research Training Program Full Stipend & Fee Offset Scholarships 2019–2023
Australian Research Council Discovery Project PhD Fellowship 2019–2023
Research Grant and Travel Grant, Research School of Economics, Australian National University 2021–2022

Professional Activities and Other Experience

Open-Source Project: `sparsepea.py` package for solving DSGE models with sparse grids 2025
Head Organiser, Income-Contingent Loans Research and Policy Conference, Australian National University 2022
Heterogeneous Agents and Continuous Time Modelling, Graduate Coursework, University of Oxford 2020
Policy Analyst Intern, The Treasury (Australian Government) 2018
Research Analyst Intern, The Brattle Group 2018
Alternative Investments, Summer School, London School of Economics 2014

Computing

Python, Rust, R, Julia; Numba, JAX, Tasmanian, TensorFlow, QuantEcon; Git, LaTeX, Jupyter, Bash/Zsh

Languages and Citizenship

Languages: English (native), Arabic (beginner). Citizenship: Australian
